Making the **right** choice...

We work with you to provide a safe and reliable pumping solution to make sure your plant operates to its full capacity, however being a piece of rotating equipment, mechanical failures can unfortunately occur.

The cartridge assembly is a pre-assembled rotating element, complete with; impeller, internal magnet, all bearings, bearing support and all gaskets. In one simple action, remove the pump from the front casing and replace the rotating element with your new cartridge assembly for a quick, reliable procedure.

Once pump is back in operation, return your old rotating element to your authorized dealer or to CDR for a full through overhaul, where any broken part will be replaced. CDR will also conduct a magnet strength test and provide a full failure report, in order to fix the most probable failure cause. Our engineers are always available, to provide further recommendations to avoid further failure and improve your plant reliability.

Making the right choice for...

product | service | knowledge

The **REDUCER**

- **Reduces downtime**

Due to its integral design, engineers can replace the cartridge in a matter of minutes

- **Reduces risk**

Minimises mis-installation as this comes as a complete unit

- **Reduces Cost**

These cartridges are an economical way for keeping spares on the shelf to cover your existing CDR pumps

You can dramatically reduce costly downtime in your business...
